

Bird Feeder Instructions:

Materials needed:

Used juice or milk carton, selection of acrylic paints, paint brush, sharpie pen colours , old used milk bottle and water bottle caps (2 different sizes), googly eyes, knife, glue (hot glue gun or strong glue) orange card, scissors, hole punch and string.

Step 1: Wash out the carton thoroughly and dry. Paint the entire carton white.

Step 2: Draw a door shape onto the front of the carton and draw 2 wing shapes on either side of the carton.

Step 3: Cut out the entire front door shape to leave an opening. Cut around the wing shape but leave the top area attached, bend forward to create a wing.

Step 4: Cut a slit under the front opening and push a lolly pop stick into it. This is the perch for the bird to sit on.

Step 5: Start to decorate the carton any way you wish using acrylic paints and sharpies.

Step 6: Use glue to stick the smaller bottle cap into the larger bottle cap.

Step 7: Glue bottle caps to the carton and stick googly eyes to the centre to create a pair of eyes. Cut out a triangular shape from a piece of orange card and glue just under the eyes to create a beak.

Step 8: Add details to the wings and front of the carton to create feather like shapes.

Step 9: Pierce a hole in the top and feed through some string to create a tied loop. Fill with birdseed. You have created your bird feeder. Hang out in the garden for the birds to enjoy!
